

# Aquila Live

May 2018

---

Aquila Live, previously Aquila Broadcast, Previously Linear Broadcast etc. Basically, an nCompass Controlled solution with Encoding Live and Multiplexing.

I am starting this page from Aquila Live version **7**.

There are two major differences between Aquila Broadcast (so everything up to v5.0.9) and Aquila Live v6 and onwards. These are:

1. Aquila Live V6 moved from Centos (v7.8) to Alma Linux (v8.7 at the time of writing)
2. Aquila Live moved from RPM (v5) to cRPM (Containerised) installs, using dDocker/PODs/Containers.

For point 2, the user will mostly see no difference, but a lot of ways of working from v5 will not work, because now you have to work inside a POD rather than just at the OS level.
