

Creating a single MPG4 output

Apr 2020

In this example we will look at how to create a single MPG4 output from an input file. This guide assumes that you have a working MK Encoding on Demand and have some local or shared files to encode. This guide also assumes you have used MK products before and are at least a little familiar with the Controller interface.

The configuration of the Encoding on Demand server is done in two distinct steps:

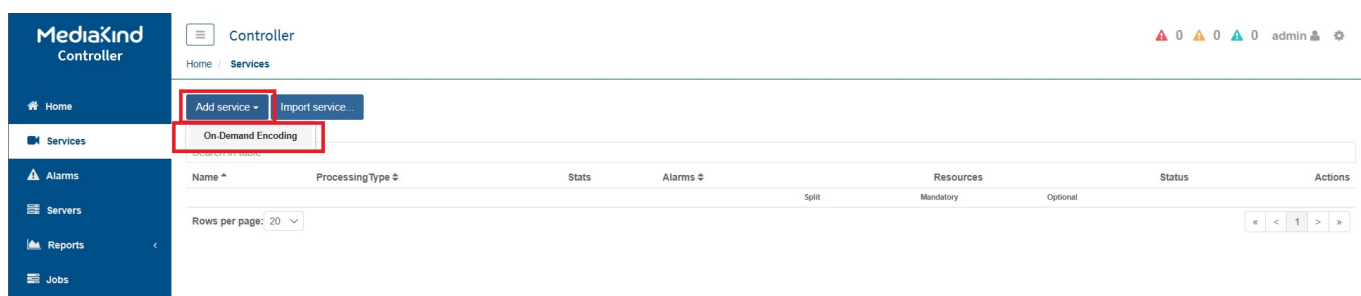

1. Service Configuration. A service configuration holds all of the video processing settings. So for instance a service called '4_Profile_ABR' would be configured to take an input and create four Video and an audio for use in ABR output. The output location would be specified along with a manifest. However this service configuration knows nothing about the input.
2. Jobs. Once you have created a Service, you can enter that service and create 'Jobs'. So everytime you wanted a 4 Service ABR output, you would add a new job, and define what source file you want to be encoded.

[Log in to the MKEO to see the normal Controller view.](#)

Click the Services Panel.

The Service page will now be in view.

Select 'Add Service' and then 'On-Demand Encoding'

The On-Demand Settings page will open.

Exit

Save and continue

Save and exit

Now edit the following settings:

- Name:** Put any name you like here, if you leave this empty a name will be generated for you.
- Input Stream Selection:** Ensure you tick all components you require (Video and Audio as a minimum generally)

Now Select the 'Encoding Tab'

For this example we will only have a single video stream.

Click the 'Edit' icon (the Pen) next to the video component.

Stream metadata settings ▼

Cancel Apply

Set the parameters as you wish.

Note: The **Quality Preset** has three settings, and they are:

High Quality - Gives the best Picture quality.

Fast - A trade of between Speed and Picture Quality.

Ultra Fast - Gives the best Speed but compromised Picture Quality.

Click **Apply** to close this page.

You will be returned to the Encoding page, select the next tab along called **Output**.

Save and exit

Change the output_1 from the default of MPEG2-TS file to MP4 File.

This will cause a pop-up page to open.

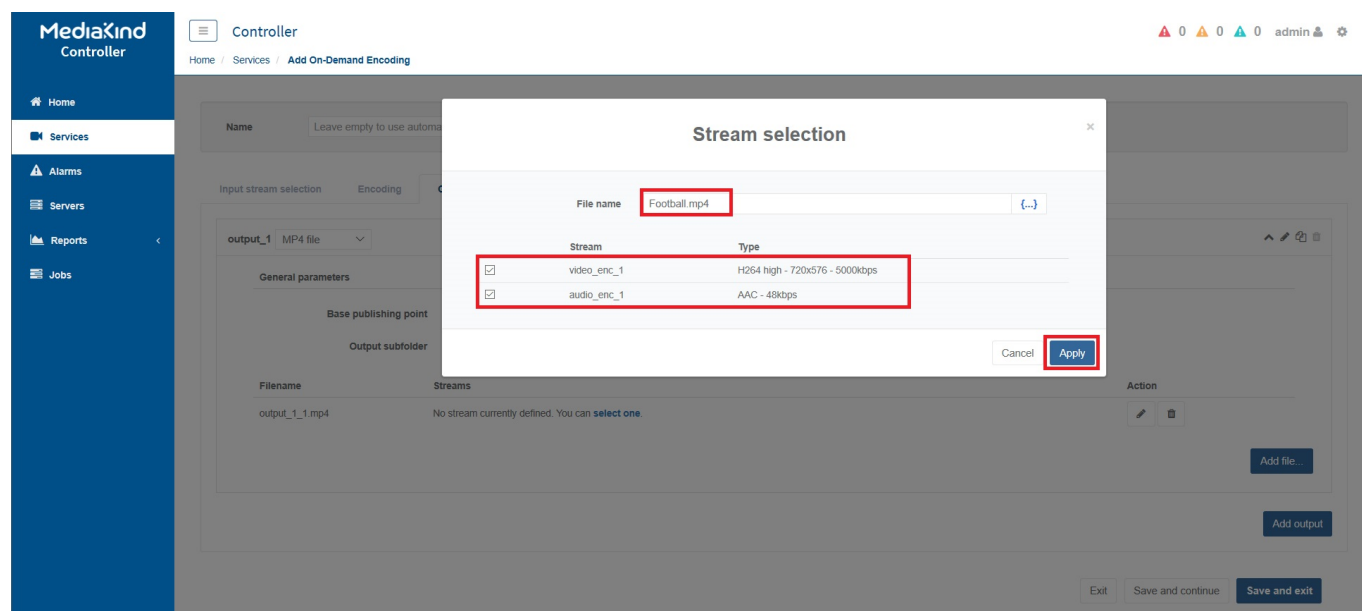

http://cameraangle.co.uk/

Printed on 2024/06/02 16:24

Select 'Yes, change it!'

Now you can edit the stream selection.

Enter the following:

File name - This will be the name of the file on the output.

Stream - Tick the streams you want included in this MP4 file (only select one video, this is not an ABR output).

Click **Apply**.

You will be returned to the Controller Service page. Before proceeding ensure that you **select a valid server** (standalone in this case) and Start the service by **clicking the play button**.
