

# MFEL - Media First Encoding Live (All Versions)

---

This page contains information for both the MFEL product (v6/v7/v8/vX) and specific CentOS tools. However v8 Specific information is in the [Version 8](#) pages.

The Media First Live Encoder (formerly Muse Live) is a software based encoder supplied by Ericsson (acquired from Envivio) that is available as a software only, or appliance (appliance is where the hardware and software are supplied pre installed to the customer).

Some of these pages are used elsewhere on this site, but these topics are so key to our products I decided to include the most pertinent topics here as well. Also this page is not accessible without password access, and I want everyone to be able to access these topics.
