

Add a Network Interface without using USB

The Pi Zero has the limitation of only having a single USB port. If you want to put your Pi Zero on the LAN, then you need to add a network port, this is normally done using a USB Nic.

I hate buying anything for the Pi Zero that costs proportionally more than the Pi Zero, and USB network adapters fall in to that category. Pay a few quid for one, and you only get a crappy unreliable Nic that is sold as USB2, but is normally an old USB 1.x and that fails all the time, believe me, I have tried a lot of them.

Then I came across this website <http://raspi.tv/2015/ethernet-on-pi-zero-how-to-put-an-ethernet-port-on-your-pi>

What they have done is used a network module that runs on the SPI bus. Its a cheap unit that you can get from ebay for around £3, and while they are cheap, they are reliable, albeit a little slow, but not so slow that they are unusable. I will take reliability over speed any day.

Here is the unit I purchased from eBay for £2.07p

The seller on eBay is [chips-fans](#) and while it has the same part number as the one used on [raspi.tv](#), the pins are different, which is a bit annoying, but it wasn't to hard to work out.

Connecting the NIC

Here are the connections I used for this board:

| GPI0 | RPi Pin | Nic PNo | Nic Func |
|--------|---------|---------|----------|
| n/c | | 1 | CLK |
| n/c | | 2 | WOL |
| GPI010 | 19 | 3 | SI |
| GPI008 | 24 | 4 | CS |
| 3v3 | 17 | 5 | Vcc |
| GPI025 | 22 | 6 | NT |
| GPI009 | 21 | 7 | SO |
| GPI011 | 23 | 8 | SCK |
| n/c | | 9 | RST |
| GND | 20 | 10 | GND |

Configuration

Enable the SPI Pins:

Last
update:
2023/03/09 add_a_network_interface_without_using_usb http://cameraangle.co.uk/doku.php?id=add_a_network_interface_without_using_usb&rev=1472334498
22:35

From the command line
sudo raspi-config
Advanced Options - SPI - Yes to Enable
