

Check Disk Space

Working from the command line has some disadvantages, one of those is that you don't have a constant graphical reminder of physical and available disk space. To check this we can use the command **df** which stands for **disk filesystem**

From the command line:

df -h — (the -h means human readable format, so instead values being in bytes, they are displayed at MB or GB etc)

```
$ df -h\\
Filesystem      Size  Used Avail Use% Mounted on\\
/dev/root        6.0G  3.7G  2.0G  66% /\\
devtmpfs         214M    0   214M    0% /dev\\
tmpfs            218M    0   218M    0% /dev/shm\\
tmpfs            218M  4.5M  213M    3% /run\\
tmpfs            5.0M  4.0K   5.0M    1% /run/lock\\
tmpfs            218M    0   218M    0% /sys/fs/cgroup\\
/dev/mmcblk0p6   63M   20M   43M   32% /boot\\
tmpfs            44M    0   44M    0% /run/user/1000\\
```
