

Colour Text

As the title suggests, this allows the use of coloured text, something Dokuwiki does not provide for by default.

```
Code Example
<color blue/lightgrey>text</color>
<color #FF0000>text</color>
```

Above we can see that the colour of the text can be either a **Word** or can be a **hex value** for an exact colour.

Please note the **American** spelling of the word **Color**.
