

# HDR Advanced Parameter Settings

In the AVP4000 HEVC Card (as of Dec 2016) we have the following menu for HDR Signalling:

However the MFEL does not have a menu for this, and any HDR (fixed) signalling has to be entered in to the Console page. Please bear in mind that this will only be an issue until there is a standard to signal this in the SDI interface, then this will be automatic (if signalled correctly)

- Supplemental Enhancement Information (SEI)
- Video Usability Information (VUI)

SEI and VUI messages contain extra information that can be inserted into the bit stream to enhance the use of the video for a wide variety of purposes (HDR, 3D for example)
