

Remove MFEL (Muse) Software

Jan 2017

If you have a unit that is failing, or wish to just install a new version of MFEL, it can be better to uninstall the older version first. For this I would do the following:

1. Backup your configurations
2. Copy the license files from /tmp (license.fli and license.sli)
3. Run the removal script

To remove the MFEL software, navigate to:

```
/opt/envivio/muse/bin
and run the uninstall script.
./envivio_muse_uninstall.sh
Removing Envivio Muse Product...
removing envivio-muse          ... SUCCESS
removing python27              ... SUCCESS
removing protobuf              ... SUCCESS
removing ms416                 ... SUCCESS
removing deltacast-hd          ... SUCCESS
removing deltacast-x300        ... SUCCESS
...Done
```

Now you can install the new version of MFEL.
