

Remove a Product

Jan 2020

Introduction

I stumbled across this by accident, now while there are some 'uninstall' scripts on the Encoding Live, they don't seem to remove everything, this means installing or reinstalling can fail.

However, in the folder: (this is a hidden file, you will only see it if you use `ls -ah`)

```
/opt/ericsson/encoding-live-standalone/setup/
```

There is a file:

```
.clean_up_el_and_controller.sh
```

This file starts with a full stop, I think that means its hidden (you wont see it on an `ls` command unless you use `-ah` which is show hidden)

If you run this file from command line, you have to do the normal `./` but with the extra full stop

```
./ .clean_up_el_and_controller.sh
```

This removed everything for me, controller, EL, all configs etc. (licenses as well)

But I was able to treat the OS like virgin OS and reinstall Controller and EL, and it worked perfectly, this I think would even allow you to 'downgrade'
