

Route Command (now ip route)

2016 - updated Jun 2017

— The **route** command has now been replaced. The command was deprecated some time ago, but continued to be used. The replacement is part of the **IP** command set.

Pre CentOS 7 you can still use route, but as of v7 the IP command should be used.

```
ip route
default via 192.168.27.254 dev enp4s0f0 proto static metric 100
10.0.0.0/8 dev ens513f0 proto kernel scope link src 10.0.222.2 metric 100
11.0.0.0/8 dev ens513f2 proto kernel scope link src 11.0.222.4 metric 100
192.168.27.0/24 dev enp4s0f0 proto kernel scope link src 192.168.27.222 metric 100
```

—
The **route** command allows dynamic setting of a route from the command line, however using **route** without any parameters will show the currently configured routes.

Raspbian

Raspbian Jessie on a Raspberry Pi 3 (LAN connected only, no wifi or bluetooth)

```
route
Kernel IP routing table
Destination     Gateway         Genmask        Flags Metric Ref  Use Iface
default         137.58.71.254   0.0.0.0       UG    202      0      0 eth0
137.58.68.0     *              255.255.252.0  U     202      0      0 eth0
```

Here we can see the default gateway is **137.58.71.254** on **eth0**

CentOS

CentOS 6.6 on a server with 6 network interfaces (only eth0 is physically connected).

```
route
Kernel IP routing table
Destination     Gateway         Genmask        Flags Metric Ref  Use Iface
192.168.5.0     *              255.255.255.0  U     0      0      0 eth4
192.168.4.0     *              255.255.255.0  U     0      0      0 eth2
192.168.4.0     *              255.255.255.0  U     0      0      0 eth3
192.168.3.0     *              255.255.255.0  U     0      0      0 eth1
192.168.27.0     *              255.255.255.0  U     0      0      0 eth0
link-local       *              255.255.0.0    U     1002    0      0 eth2
link-local       *              255.255.0.0    U     1003    0      0 eth3
link-local       *              255.255.0.0    U     1004    0      0 eth4
link-local       *              255.255.0.0    U     1005    0      0 eth5
link-local       *              255.255.0.0    U     1006    0      0 eth0
link-local       *              255.255.0.0    U     1007    0      0 eth1
default          192.168.27.254  0.0.0.0       UG    0      0      0 eth0
```

Here we can see the default gateway is **192.168.27.254** on **eth0**
