

Simple Linux TS Streamer

Oct 2020

This Simple Linux TS Streamer allows the streaming of SPTS or MPTS files using just a simple CentOS/Redhat OS.

TS_Streamers_file

Copy the above file to your CentOS VM - extract it and navigate to openstack...../mpeg2tsbroadcaster/ folder. (/opt/streamer/bin by default)

In there run the following command:

```
nohup sudo ./mpeg2ts_broadcaster 10.132.0.7 239.1.1.1 1234 0 ~/temp/F3720p.ts &
```

Where:

10.132.0.7 → is the IP address of the interface you want to stream from

239.1.1.1 → multicast you want it come out on

1234 → Port

0 → To loop forever

~/temp/F3720p.ts → Path to your ts file to use

If you wrap the nohup and & around it, you can then disconnect and leave it running.

To kill it:

Sudo ps aux | grep mpeg2

You will see it running as a process - just need to kill it: sudo kill -9 processid
