

To-Do

do I have to?

You should have guessed, this is stuff I need to do, but have not yet started (or at least started but no attempt to document) Just because it's here though, I still may never do it. These are just a few things that I have thought of, there is other content I am working on for the site, but I don't put things here that I am near completing (because they are relatively short tasks).

<https://letsencrypt.org/>
https://en.wikipedia.org/wiki/Wildcard_certificate

<https://supportforums.cisco.com/discussion/9806336/find-ip-addressmachine-connected-cisco-switch-port>

<https://www.youtube.com/watch?v=Bvq0LdBn0dY> Touchscreen LED control TK inter

<http://www.cyberciti.biz/faq/howto-linux-add-user-to-group/> - add user to group command line

Camera Slider for Time Lapse - This will only happen once I have a GUI, and can fire the camera.

write a script to delete folders older than 12 weeks (so keep 12 rolling backups) - Should this be a manual process for sanity checking?

cron job to check backup log for 'Finished' so we know the job got to the end

Auto delete files

```
#!/bin/bash #Count files less than a week old
```

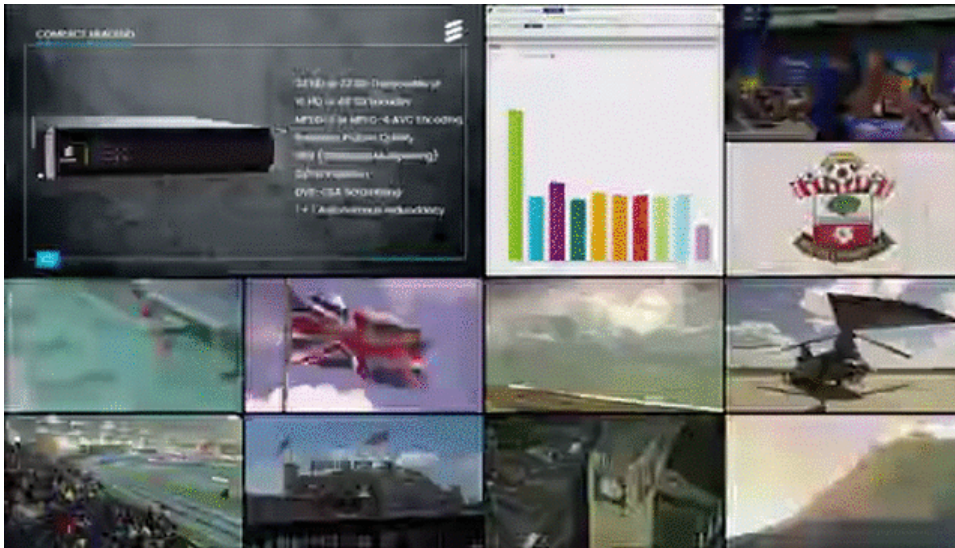

```
all_files_found=$(ls -l "/home/charles/testarea" | wc -l); weekold_files_found=$(find "/home/charles/testarea" -daystart -type f -mtime +6 | wc -l);
```

```
right_now=$(date +"%x %r %Z"
```

```
#Write report of action echo "List " $all_files_found "files found on $right_now by $USER" echo "Find " $weekold_files_found "more than a week old files found on $right_now by $USER" #####
```

```
#Delete files older than 1 week find "/home/charles/testarea" -type f -daystart -mtime +6 | while read x; do ls -l "$x"; done
```
