Using Tee to Output to File and Screen

2016

When you want to redirect the output of a command to a file you can use the redirector **>**

```
ls -al > result.log
```

However, this means that you see nothing on the screen, to avoid this use the **Tee** Command:

```
ls -al | tee result.log
```

Now you get the result on both the screen and in the file.
