

Configure IP Address

In CentOS 6x the IP settings are held in file(s) located in the **/etc/sysconfig/network-interfaces** directory, there is one file for each physical interface, they are generally called:

ifcfg-eth0
ifcfg-eth1
ifcfg-eth2
ifcfg-eth3
ifcfg-eth4
ifcfg-eth5
ifcfg-lo

To see exactly what files you have, and what they are called simply do a list

```
ls /etc/sysconfig/network-scripts
```

To edit a file enter:

```
vi /etc/sysconfig/network-scripts/ifcfg-eth(0) --- (use the correct eth number for your system)
```

Below is an example of a static ip configuration for the first NIC (ifcfg-eth0)

```
DEVICE="eth0"\nBOOTPROTO=none\nIPV6INIT=no\nNM_CONTROLLED=no\nONBOOT="yes"\nTYPE="Ethernet"\nIPADDR=192.168.27.110\nNETMASK=255.255.255.0\nGATEWAY=192.168.27.254\nPERSISTENT_DHCLIENT=yes\nDHCP_HOSTNAME=h64.envivio.com
```
