

# IP - the ifconfig replacement

Anyone who has used Linux will likely be familiar with the `ifconfig` command. Apparently `ifconfig` was deprecated some time ago, but has still been included in CentOS and Red Hat. Well version 7 has finally left out `ifconfig` and so now we move on to it's replacement called `ip`

## Basic IP Commands

```
ip a
```

This command will list all interfaces with their associated information.

```
1: lo: <LOOPBACK,UP,LOWER_UP> mtu 65536 qdisc noqueue state UNKNOWN group default qlen 1
   link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
   inet 127.0.0.1/8 scope host lo
